

## AFTER VISIT SUMMARY

Dakota R. Newman DoB: 4/21/1993

5/24/2021 11:30 AM PMG SE WA PHYSIATRY 509-897-8306

### Instructions from Corey Carson, PA-C

Injection orders may take 2 weeks before insurance approval.. Once approved, we will call you for scheduling.  
=====

Please remember to complete pain log and turn it into our office when completed. This is an insurance requirement and allows faster approval of any future injections. (Injections can take up to 10-14 days before you notice relief.)  
-----

Follow-up at the hospital thirty minutes before your scheduled procedure to allow for time to check in.

You may eat and drink as usual on the day of the procedure. If you are scheduled for an epidural injection do not take any blood thinning medications for at least 5-7 days prior to your procedure unless you have been instructed by another physician not to discontinue blood thinning medications.

If you are having a procedure other than an epidural injection (i.e. facet injection, medial branch block, SI joint injection or other joint injection) it is not absolutely necessary to discontinue blood thinning medications but doing so will decrease the risk of bruising or bleeding.

If you have had a prior stroke, DVT or PE or if you are taking blood thinning medication because you have atrial fibrillation, a prosthetic cardiac valve replacement or heart stenting do not stop taking your blood thinning medications unless you have **permission from your cardiologist** or primary care provider.

All other medications should be taken as usual on the day of the procedure.

### Today's Visit

You saw Corey Carson, PA-C on Monday May 24, 2021. The following issues were addressed:

- Lumbar radiculopathy
- Right-sided back pain, unspecified back location, unspecified chronicity
- Numbness and tingling of right leg
